U.S. Department of Energy
Attn: Proposed Plan Comments
Rocky Flats Nuclear Weapons Plant SuperFund MegaSite
12101 Airport Way, Unit A
Broomfield, CO 80021-2583

Subject: Final Clean Up Comments.

Persons:

At the last public meeting in Westminster, fraser lockhart once again, tried to snow us with precipitation precluding dewatering the site - an argument that was submitted to a deaf Department of Energy for evaluation, which they chose to ignore about 15 years ago when it was first proposed by Mr. James S. Stone, P.E., a real hero who brought the plant to closure more than anyone else. Mr. Stone in the complete opposite of lockhart, who still practices the crimes of omission, lying, and deception. Remember Dr. Edward Martell's warning about the crimes of omission?

As was admitted in the last public meeting in Westminster, expensive, perpetual (until defunded) ground water treatment and hopefully, complete removal of dangerous chemicals that would otherwise be flowing into our community, has been used there for a long time as a huge pork barrel project. As everyone knows this is a really big, never ending cash cow for its contractor(s). Simply let ground water get contaminated from unremediated (negligent) messes then spend lots of unnecessary taxpayers' dollars to try to clean it up.

Mr. Stone proposed long ago, construction of a trench down to bed rock filled with packed clays, and maybe the right membrane, upstream (west) of the remaining messes, and curved east on the north and south ends would properly drain and divert ground water around existing contamination and would prevent its contamination in the first place. This would also end the contractors' cash cow. You say bed rock is from 0.5 to 15-17 meters deep? So what. The dikes in New Orleans are a lot deeper than that and they are being installed with the river running on one side!

As usual, the crooked, immoral people now in charge of the Rocky Flats Nuclear Weapons Plant SuperFund MegaSite mess, once again think the locals are a bunch of hayseeds who are too dumb to know who's trying to hoodwink them again. We always know when we see lying, unprepared, technical morons & crooks like fraser lockhart. It's you plant people who just don't get it. Read the transcripts of the last two trials of RFP operators, that resulted in hundreds of millions in judgments because of lying and cheating. Time to fire lockhart!

Public Comments, RFCC.

At the last public meeting in Arvada on 31/8, supposedly to gather public comments, it seemed that this was a charade required in their contract, put on for community appeasement at huge cost to the taxpayers. Why did this come across as phony and insincere, to people who had already made up their minds and too hell with comments? You fools even stated you couldn't receive comments by FAX!
